## Instructions to Authors

1. Papers will be published in **English, French or German.**

2. Authors should submit **manuscripts together with two copies.** The original illustration material (original drawings etc.) and two copies should be submitted together with the manuscript.

3. The text should be as **clear and concise** as possible. Both form and content of the paper should be carefully checked to exclude the need for corrections in proof. A charge will be made for changes introduced after the manuscript has been set in type.

4. **Manuscripts** should be typewritten, double-spaced, on one side of letter size paper and with wider margin on the left. The author should mark in the margin where figures and tables may be inserted. All pages should be numbered consecutively. Tables, footnotes and legends for illustrations should be typed (double-spaced) on separate pages. Use the metric system for text and figures.

5. The **first page** should bear:

the title; the name(s) of the author(s); the name of the laboratory where the work was carried out; a running title of not more than 67 typewriter strokes; footnotes to the title (marked by asterisks).

6. Each paper should be preceded by a brief **abstract** in English concerned with the methods used and with the experimental results which should be presented in such a way that it is possible for the reader to assess their significance. It should be as short as possible and should **not exceed 200 words.**

French and German articles should also have an **English translation of the title.**

7. Immediately following the abstract, some relevant **key words** should be supplied for subject indexing.

8. Articles dealing with **original investigations** should first state the problem concisely and arrange the material under Methods, Results, Discussion, References.

9. **Footnotes** should be kept to a minimum and numbered consecutively throughout the paper. Footnotes referring to the heading of the article are to be marked by asterisks.

10. The **bibliography** should include only work cited in the text. References should be listed alphabetically at the end of the paper as follows; *journal papers*—names and initials of all authors, full title, journal abbreviated in accordance with World Medical Periodicals, volume number, first and last page numbers, year in parentheses; *books*—names of authors, full title, edition, place, publisher, year. *Examples:*

Latz, A., Bain, G. T., Kornetsky, C.: Attenuated effect of chlorpromazine on conditioned avoidance as a function of rapid acquisition. *Psychopharmacologia (Berl.)* 14, 23—32 (1969).

Fisher, S., Cole, J. O., Rickels, K., Uhlenhuth, E. H.: Drug set interaction: The effect of expectation on drug response in outpatients. In: *Neuropsychopharmacology*. Bradley, P. B., Flugle, F., and Hoch, P., eds., vol. 3, pp. 149—156. Amsterdam: Elsevier 1964.

Several publications by the same author or group of authors should be listed in chronological order; those that appear in the same year should be distinguished by the suffixes a, b, c etc. Citations in the text should be given in parentheses, e.g. (Beckman, 1958; Brown, 1963), except when the author's name is part of a sentence, e.g. "Man (1966) reported that . . ." When a paper with more than two authors is cited, all authors are named the first time, but subsequently only the first author, e.g. (Miller *et al.*, 1963).

11. Figures should be separated from the text and numbered. They should be restricted to a minimum. Descriptions in captions should not be expanded in the text, nor should the same data be given in both graph and table form. Coloured or previously published illustrations are not usually accepted. Original drawings and graphs should be drawn in Indian ink with lines of uniform thickness. Where possible, **figures should be grouped**, bearing in mind maximum display area is  $108 \times 177$  mm ( $4\frac{1}{4} \times 7$ "). In general it should be assumed that the same degree of reduction will apply to all figures in the same paper. Inscriptions should allow for any reduction in scale—a capital letter should be about 1.8 mm high in the final version. If figures have to be redrawn for the block-maker, this may cause considerable delay in publication. Photographs should be sharp, well-contrasted glossy prints at right angles. Authors should mark them with Letraset (Instant Lettering).

# Handbook of Sensory Physiology

**Editorial Board:**  
H. Autrum, Munich;  
R. Jung, Freiburg;  
W. R. Loewenstein, New York;  
D. M. MacKay, Keele,  
Staffordshire (GB);  
H. L. Teuber, Cambridge, Mass.  
(USA)

Distribution rights for India:  
The Kothari Book Depot in Bombay

How is the information contained in an environmental stimulus converted into meaningful responses by an organism? How does an organism perceive the outside world, its energy fields in space and time, and transform it into purposeful reactions? These are central themes of sensory physiology. The Handbook of Sensory Physiology will compile authoritatively the present state of our knowledge in this regard.

Volume III, Part 1

## Enteroceptors

Edited by Professor **E. Neil**,  
Department of Physiology,  
Middlesex Hospital Medical School,  
London W. 1, England

With contributions by B. Andersson,  
M. Fillenz, R. F. Hellon, A. Howe,  
B. F. Leek, E. Neil, A. S. Paintal,  
J. G. Widdicombe

The book consists of six concise chapters on the functional characteristics of the various enteroceptors. Cardiovascular mechanoreceptors, arterial chemoreceptors, receptors of the lungs and airways and abdomino-pelvic visceral receptors represent the better known peripheral enteroceptors. Also included are two chapters on "central receptors" respectively concerned with thermoregulatory processes and with hunger and thirst.

Emphasis has been placed on the electrophysiological studies of these receptors and their afferent fibres but such emphasis has not excluded consideration of anatomical and electron microscope evidence of their site and nature. Similarly the role of these afferent endorgans in the body has been given due attention.

These essays are designed to interest the graduate student and to stimulate research. A full bibliography is provided after each chapter.

With 91 figures  
VIII, 233 pages. 1972  
Cloth DM 96,—  
Subscription price  
Cloth DM 76,80

The subscription price is applicable on orders for the complete set of published and unpublished volumes. All volumes and subvolumes are available separately at list price.
